COCOMO RESULTS for Banking Software for Embedded Systems								
MODE	**"A" variable**	**"B" variable**	**"C" variable**	**"D" variable**	**KLOC**	**EFFORT, (in person-months)**	**DURATION, (in months)**	**STAFFING, (recommended)**
embedded	3.8302608681087134	1.2	2.5	0.32	400.000	5078.089	38.350	132.415

Explanation: The coefficients are set according to the project mode selected on the previous page, (as per Boehm). Note: the decimal separator is a period.

The final estimates are determined in the following manner:

effort = a*KLOC^{b}, in person-months, with KLOC = lines of code, (in thousands), and:

staffing = effort/duration

where a has been adjusted by the factors:

Product Attributes	
Required Reliability	1.40 (VH)
Database Size	1.08 (H)
Product Complexity	1.15 (H)
Computer Attributes	
Execution Time Constraint	1.30 (VH)
Main Storage Constraint	1.06 (H)
Platform Volatility	0.87 (L)
Computer Turnaround Time	1.15 (VH)
Personnel Attributes	
Analyst Capability	0.71 (VH)
Applications Experience	0.91 (H)
Programmer Capability	0.70 (VH)
Platform Experience	0.90 (H)
Programming Language and Tool Experience	0.95 (H)
Project Attributes	
Modern Programming Practices	0.91 (H)
Use of Software Tools	0.91 (H)
Required Development Schedule	1.10 (VH)
New (Values are probably wrong)	
Required reusability	1.05 (H)
Documentation match to life-cycle needs	1.20 (VH)
Personnel continuity	1.00 (VH)
Multisite development	1.00 (L)

For further reading, see Boehm, "Software Engineering Economics"

WARNING: If you see "NaN" or "undefined" in any field above, you have entered an **INVALID** value for KLOC or Mode! Hit the "BACK" button on your browser, hit the "RESET" button if you entered data previously, enter a **DECIMAL NUMBER** in the KLOC input text box and click on the appropriatre mode!

The project should save the results of this COCOMO calculation if needed to support its make or buy decision.
